INDIAN SCHOOL NIZWA - WORKSHEET

5. Difference between alert and confirm.

6. Observe the code given below and answer the questions that follow.

```
<script language="JavaScript">
```

```
    X= (20*2) % (4/2)
    Y= 60%3
    if (!(Y>=X)|| X!=5))
        Z=7
    else
        Z=20
```

```
</script>
```

- Name the two relational operators used in the above code segment.
 - Name the two logical operators used in the above code segment.
 - Name the 3 arithmetic operators used in the above code segment.
 - Explain the role of the ! operator in the above code segment
7. Name the keyword used for declaring local variables.

ANS:

- Write a script to read 2 numbers and display their sum, difference, product, quotient and remainder.
- Write a script to read temperature in Fahrenheit and convert it into Celsius.
- Write a script to read distance in kilometers and convert it into meters.
